

IN THE CLAIMS:

Claims 1-11 (Cancelled)

12. (New) A device for delivering a supply of gases to a user comprising:
a patient interface, in use in fluid communication with said supply of gases,
a forehead rest engaging said interface including a deformable resilient member
configured to in use rest against the face of a patient,
said deformable resilient member when compressed in use creating a uniformly and
gradually increasing force, while evenly distributing the pressure on the forehead of said patient
that contacts said resilient member,
said deformable resilient member having a top surface and a base connected by two side
walls, said side walls being substantially thinner in width than said top surface said side walls in
use are compressible.
13. (New) A device for delivering a supply of gases to a user according to claim 12 wherein
said top surface includes additional support at its center to limit its collapse.
14. (New) A device for delivering a supply of gases to a user according to claims 12 or 13
wherein said side walls are capable of folding under compression.
15. (New) A device for delivering a supply of gases to a user comprising:
a patient interface, in use in fluid communication with said supply of gases,

a forehead rest engaging said interface including a deformable resilient member configured to in use rest against the face of a patient, said deformable resilient member being of a hollow conical shape where in use and under compression the top part of said hollow cone deforms or the side walls of said cone deform.

16. (New) A device for delivering a supply of gases to a user comprising:
a patient interface, in use in fluid communication with said supply of gases,
a forehead rest engaging said interface including a user-adjustable deformable resilient member configured to in use rest against the face of a patient.
17. (New) A device for delivering a supply of gases to a user according to claim 16 wherein said adjustable deformable resilient member is at least one adjustable strap attached and adjustable on said forehead rest.
18. (New) A device for delivering a supply of gases to a user according to claim 16 wherein said adjustable deformable resilient member is a member rotatably mounted on said forehead rest.
19. (New) A device for delivering a supply of gases to a user according to claim 16 wherein said adjustable deformable resilient member is an inflatable member that is inflated with liquid or gas.
